KEY FEATURES

Quad HD Resolution

Front Quad HD and Rear Full HD cameras record outstanding video clarity under any circumstances.

Speed Camera Alert

The built-in GPS provides accurate location information while driving, and FineVu GX30 alerts the driver the traffic enforcement cameras and informs speed limit.

High Dynamic Range(HDR)

A sudden rise of light exposure caused by strong sunlight or headlight beams may degrade a quality of video footage. HDR controls the level of light exposure to maintain and clear video recordings in all circumstances.

SONY STARVIS Image Sensor

SONY Exmor R STARVIS Image sensor provides brighter and clearer image quality compared to general CMOS sensor.

4X Memory Efficiency (Smart Time Lapse)

Automatically compress recording files when there is no impact, and save the files at 30 frames per second when detects any impact. Maximizes memory efficiency comparing to standard recording mode.

ADAS

Front Vehicle Motion Alert(FVMA) lowers the risk of accidents by warning the driver impending road hazards.

Format Free Max

The most advanced format free technology eliminates the need for manual reformatting of memory card, extending memory card life and improving reliability.

Power Saving Parking Mode

Consuming 98% less power, GX7000 records 2,583 hours more than standard parking mode.
